

## Fraunhofer TESTED® DEVICE REGIOLUX GmbH PRAG 5000 ET LED IPA Report No. RE 1812-1087

Statement of Qualification

Single product
Particle Emission

## **Statement of Qualification** • Single product

Customer	Regiolux GmbH Hellinger Strasse 3 97486 Königsberg Germany	Test result / Classification	When operated under the specified test conditions, the luminaire PRAG/660 LED 5000 840 ET IP54 IPA is suitable for use in cleanrooms fulfilling the specifications of the following Air Cleanliness Class according to ISO 14644-1:	
			Test parameter(s)	Air Cleanlines Class
			Structure-borne noise = approx. 5 to 50Hz	2
Component tested			Overall result	2
Category:	Cleanroom Facilities		It should be noted that cleaning of class 1 to	E according to ISO 14644 1
Subcategory:	Lighting Systems		It should be noted that cleanrooms of class 1 to 5 according to ISO 14644-1 have a higher filter occupancy, which may restrict the use of panel lighting systems. Cleanrooms with a horizontal displacement flow form an exception	
Product name:	PRAG/660 LED 5000 840 ET IP54 IPA (manufacturing date: week 39/2018; color: RAL 9016 traffic white; serial number: 62000014113; charge number: 1516059)		to this. The test result may be affected by the surrounding ceiling system, in parti- cular the material pairing between lights and ceiling frames, as well as other mounting accessories. Particle emission behavior should be reassessed in each assembly situation.	
Random sampling of particle emissions (airborne) at representative sites				

Standards/Guidelines:	ISO 14644-1, -14		
	The norms stated generally refer to the version valid at the time of the tests.		
Test devices:	Optical particle counter: LasAir II 110 and LasAir III 110 with measuring ranges $\ge 0.1 \mu$ m, $\ge 0.2 \mu$ m,		
	$\geq$ 0.3 µm, $\geq$ 0.5 µm, $\geq$ 1.0 µm and $\geq$ 5.0 µm		
Test environment parameters:	Cleanroom Air Cleanliness Class (according to ISO 14644-1): ISO 1		
	Airflow velocity:0.45 m/s		
	Airflow pattern: vertical laminar flow		
	• Temperature:		
	• Relative humidity:		
Test procedure parameters:	The ceiling system was subjected to stress as follows:		
	Structure-borne noise:		
	• Oscillation velocity (Ø):v = 1.7833 mm/s		
	• Oscillation acceleration (Ø):a = 0.6177 m/s <sup>2</sup>		
	• Oscillation of the system (Ø):s = 0.0187 mm		

The measuring devices used for the qualification tests are calibrated at regular intervals; their results can be traced back to national and international standards. In cases where no national standards exist, the test procedure implemented complies with the technical regulations and norms applicable at the time of the test. The relevant documentation can be viewed on request at any time.

Detailed information and parameters of the test environment can be found in the Fraunhofer IPA test report.
